Portfolio

Career Objective

Frontend Developer Intern with hands-on delivery of real-world admin systems and customer-facing platforms. Strong in translating business workflows into clear UI flows, reusable React components, and reliable API integration. Seeking to contribute as a product-minded Frontend Engineer who balances user experience with system logic.

Projects

Healthcare Clinic Management System

03/2026 – Present

Fullstack Developer / Business Analyst | Team size: 5

Tech Stack: React, TypeScript, Spring Boot, PostgreSQL, TailwindCSS, Docker

- Performed Business Analysis and mapped end-to-end clinic workflows for intake, appointment, queue, consultation, and treatment operations.
- Built responsive role-based interfaces for Owner/Admin/Doctor workflows to support day-to-day operations in one system.
- Contributed to monorepo collaboration and API contract alignment between React frontend and Spring Boot backend.
- Integrated RESTful APIs with Axios and implemented secure JWT-based access with role-based permission flows.
- Developed reusable TypeScript UI components to improve maintainability and reduce duplication across modules.
- Supported developer onboarding by improving setup documentation and workflow clarity for local run and testing.

Spa Management System

01/2026 – 03/2026

Fullstack Developer | Team size: 1

Tech Stack: React 19, Node.js, Express.js, MongoDB, Ant Design, React Big Calendar, Joi, JWT

- Independently delivered a multi-branch fullstack spa platform with a customer website and an admin portal of 15+ operation modules.
- Implemented drag-and-drop booking schedules and waitlist handling to reduce conflicts and optimize appointment slots.
- Built JWT authentication with role-based access (owner/admin/ktv), protected routes, and branch-aware operation control.
- Structured frontend with reusable components, custom hooks, and a service-layer API pattern for long-term scalability.
- Developed business modules including invoice, expense, transaction, consultation, feedback, and gallery management.
- Added Joi validation, API rate limiting, and stable REST integration to improve reliability and data safety.
